

Jump start your as-builts with a 3D model

Scan existing conditions for a full-fledged 3D model. With measurements in software and an easy export to programs you already use, your engineers will get a head start when doing as-builts.

HAVE YOUR CURRENT CONDITIONS QUICKLY SCANNED

Having your as-builts 3D scanned has never been easier. We scan your property, take care of the processing and deliver your point clouds, ready to import in Autodesk Revit or Recap.

EXPORT POINT CLOUDS INTO AUTODESK® RECAP

From the Matterport Space you can easily export a **registered, colored point cloud** that is ready for Autodesk® ReCap. Use a point cloud as a real-world template to kickstart your as-built design process.

BE EFFICIENT, MEASURE WHILE OFFSITE

No need for return site visits when you have a complete 3D model on your computer. Your as-built engineers can reference the complete space throughout the design process, collecting virtual measurements whenever they need to. As built documentation has never been easier.

EXPEDITE YOUR AS-CONSTRUCTED DRAWINGS

Let our vision pipeline do the heavy lifting and automatically stitch your data into an easy-to-explore, immersive 3D model. Then have us deliver an OBJ or point cloud and import into Autodesk Revit. A great template to model existing conditions!
