

Faster building information modeling

Use Matterport Spaces as the foundation of your BIM process. They're easy to create, and more complete than manual measurements.

WIN MORE BIDS WITH BETTER DOCUMENTATION

Building owners want the construction of their buildings to be well documented. Provide them with superior construction documentation throughout the process. When you're done, give them the files they need for long-term facilities management.

Keep your documentation costs low while still offering accurate, high-quality information. With just one Matterport scan, you get **multiple assets for great documentation.**

REDUCE VIRTUAL DESIGN AND CONSTRUCTION COSTS

Make Matterport the first step in your BIM process. Use Matterport Spaces to visually analyze a property, export the **registered point cloud** into your BIM modeling software, and start modeling from existing conditions.

GET THE POINT CLOUD AND MAKE MEASUREMENTS

Get the point cloud from Matterport, import into Recap or Revit, and then take as many measurements as you want. Measurements are accurate to within 1% of reality.

With a point cloud, you can **eliminate return visits** because you always have a digital copy from which you can measure. You can also take measurements that are difficult to get in real life like pipes, trusses, and beams in the ceiling.
